

Solar Battery Charger

By: Spenton LLC

Instructions for Use

Warning: The Spenton LLC Solar Battery Charger is only to be used with the WoodGas™ campstove, or to charge 2-AA rechargeable batteries. **Do not use this charger to run other appliances or charge other types of batteries, damage or fire may result.**

To Charge Batteries:

- 1) Place 2-AA rechargeable batteries in the solar charger battery compartment.
- 2) Set the voltage switch to 6V. 2-AA batteries should charge in full sun in 4-6 hours.
- 3) The LED indicator will light when the batteries are charging.

To Run the WoodGas campstove:

- 1) Set the solar panel voltage switch to 6V.
- 2) If sunlight is sufficient, place the solar charger in the sun and plug into the WoodGas camp stove. This should start the camp stove operation just as the WoodGas camp stove battery pack.
- 3) If sunlight is not sufficient, rechargeable batteries may be placed in the solar charger battery compartment, and then the charger plugged into the stove. The WoodGas camp stove will then draw power from both the solar charger (as sun permits) and the rechargeable batteries.

Note: A built in blocking diode will prevent the batteries from discharging into the solar cells.

Warranty

Spenton LLC Warrants this solar panel for 90 days under normal use. Return to Spenton LLC for replacement or repair if defective. This Warranty is good for the original retail purchaser only, and is not transferable. This warranty does not cover damage resulting from negligent use, use contrary to the operating instructions, or disassembly or repair by anyone other than Spenton LLC.

Spenton LLC is not liable to the buyer or a third party for any damages resulting from the use of this product.

If you have any questions regarding this warranty, contact Spenton LLC: customersupport@spenton.net.
